Model-population sampling: demes added one at a time (best gain per mother, ≥ 100 m apart) until 90 % of the population's SRK alleles are expected to be detected
D1 small — P36, 2025
D1 small — P36, 2026
D1 big — P34, 2025
D1 big — P34, 2026
Share of the population's SRK alleles detected (independent simulations)
