SRK diversity gap vs pollinator radius — P41 (EO70) and P39 (EO76)
If gene flow were tighter than 50 m (H1), the gap should
shrink as radius decreases. It does not.
Predicted − observed distinct SRK alleles
(the diversity gap at each radius)
Pollinator radius used to build the deme partition (m, log scale)
50 m
(current
operational
deme)
P41 (EO70) (observed = 6 alleles)
P39 (EO76) (observed = 9 alleles)
gap: +23
gap: +22
