1. S-locus genotyping (SRK): the S-types each plant carries

P42 (EO70) — mate-limited

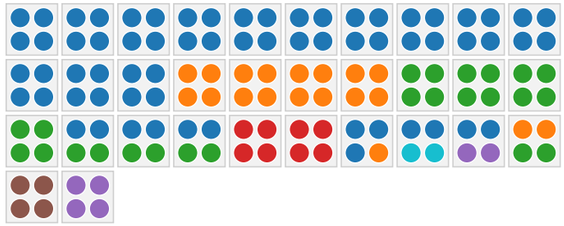

6 S-types · 74 plants

3 S-type sets = 93 % of plants

P34 (EO18) — intact

7 S-types · 32 plants

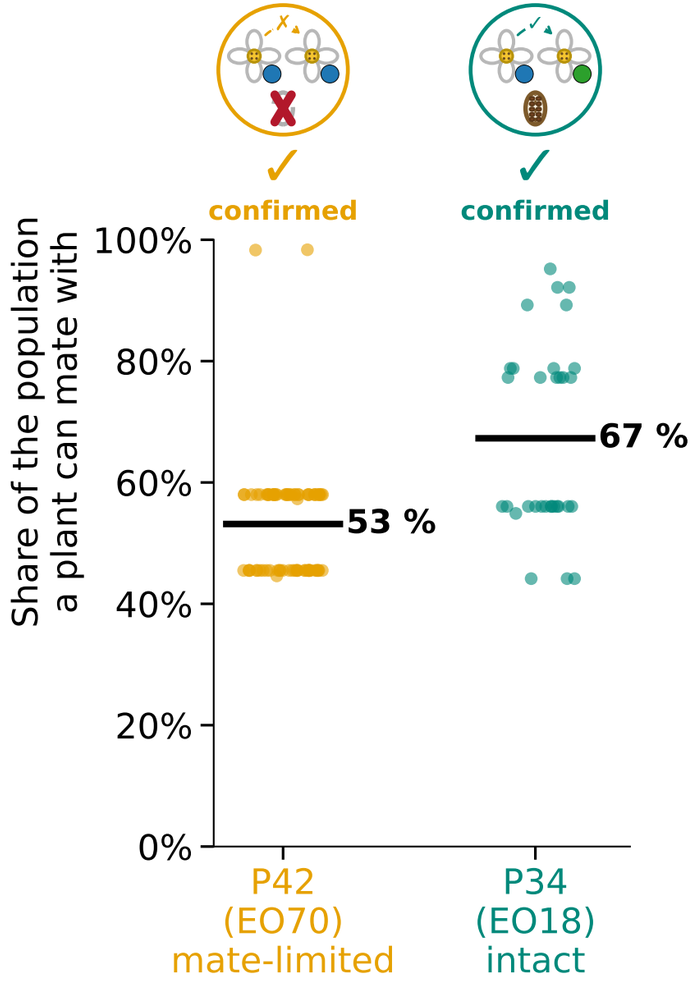

3 S-type sets = 66 % of plants

2. Compatible mates per plant

random mating

each plant meets fathers from its population; a shared S-type = rejected

Legend

1 square = 1 genotyped plant; 4 dots = its 4 SRK copies (tetraploid)

color = S-type (as in Figure 1)

dot = one plant; bar = population average
