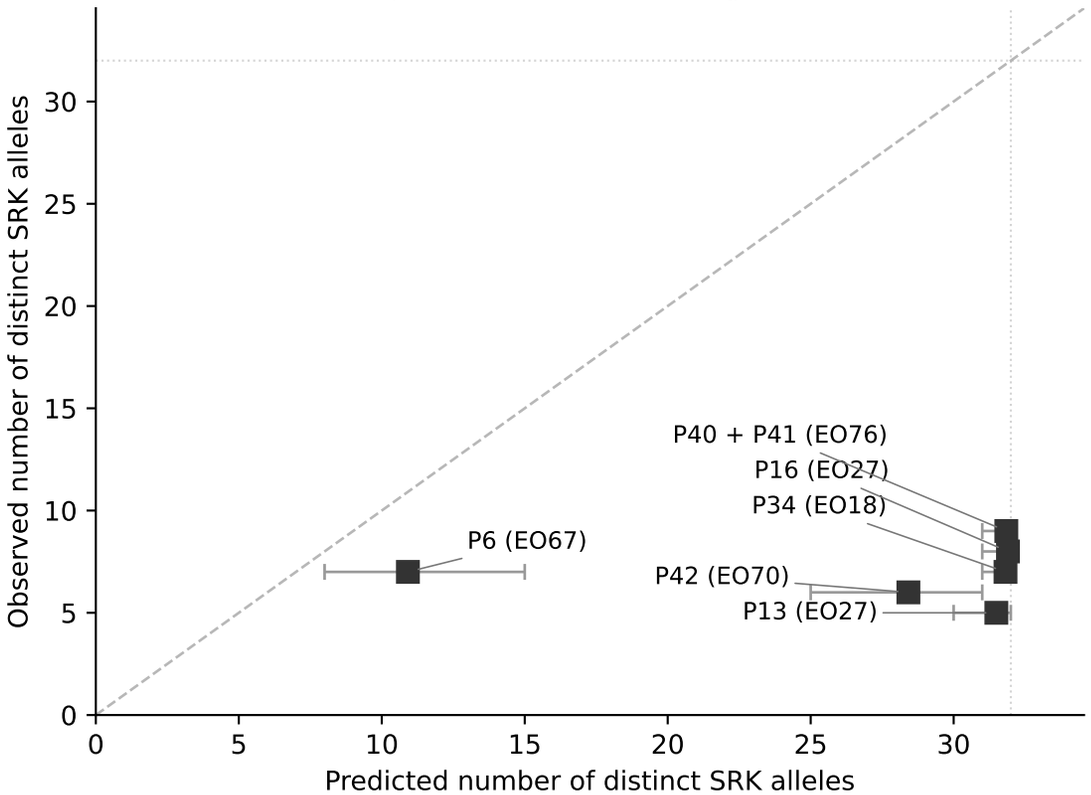
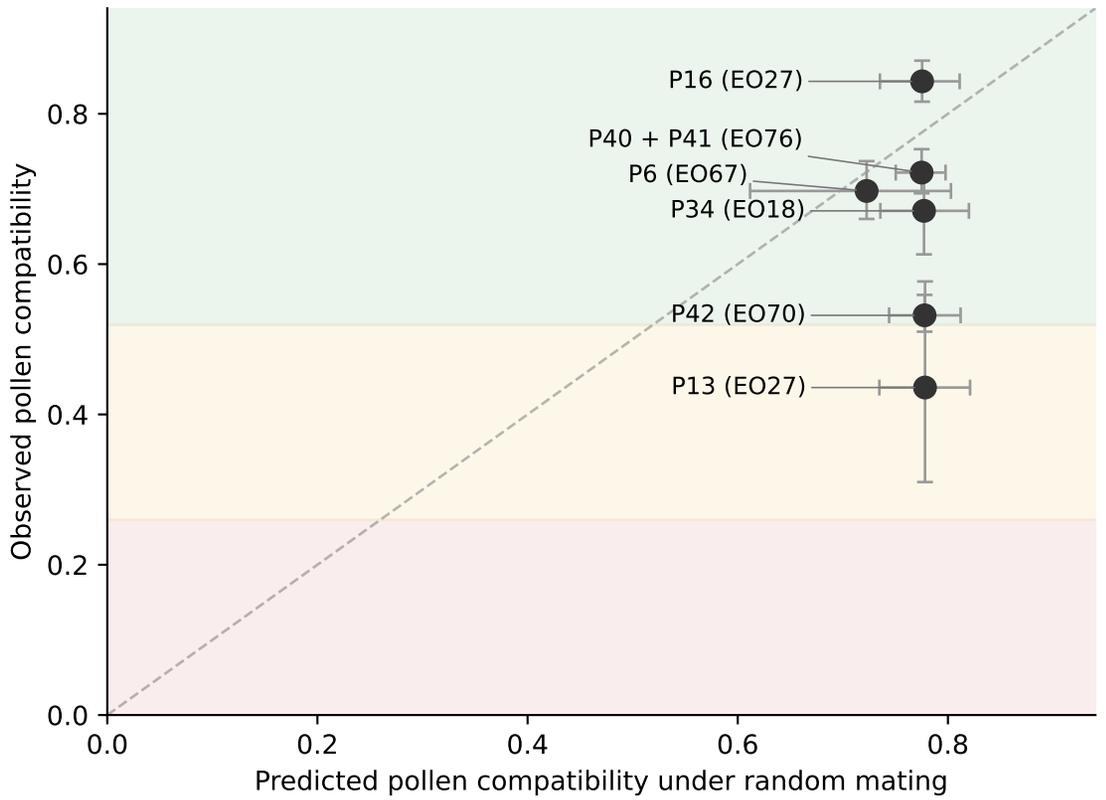
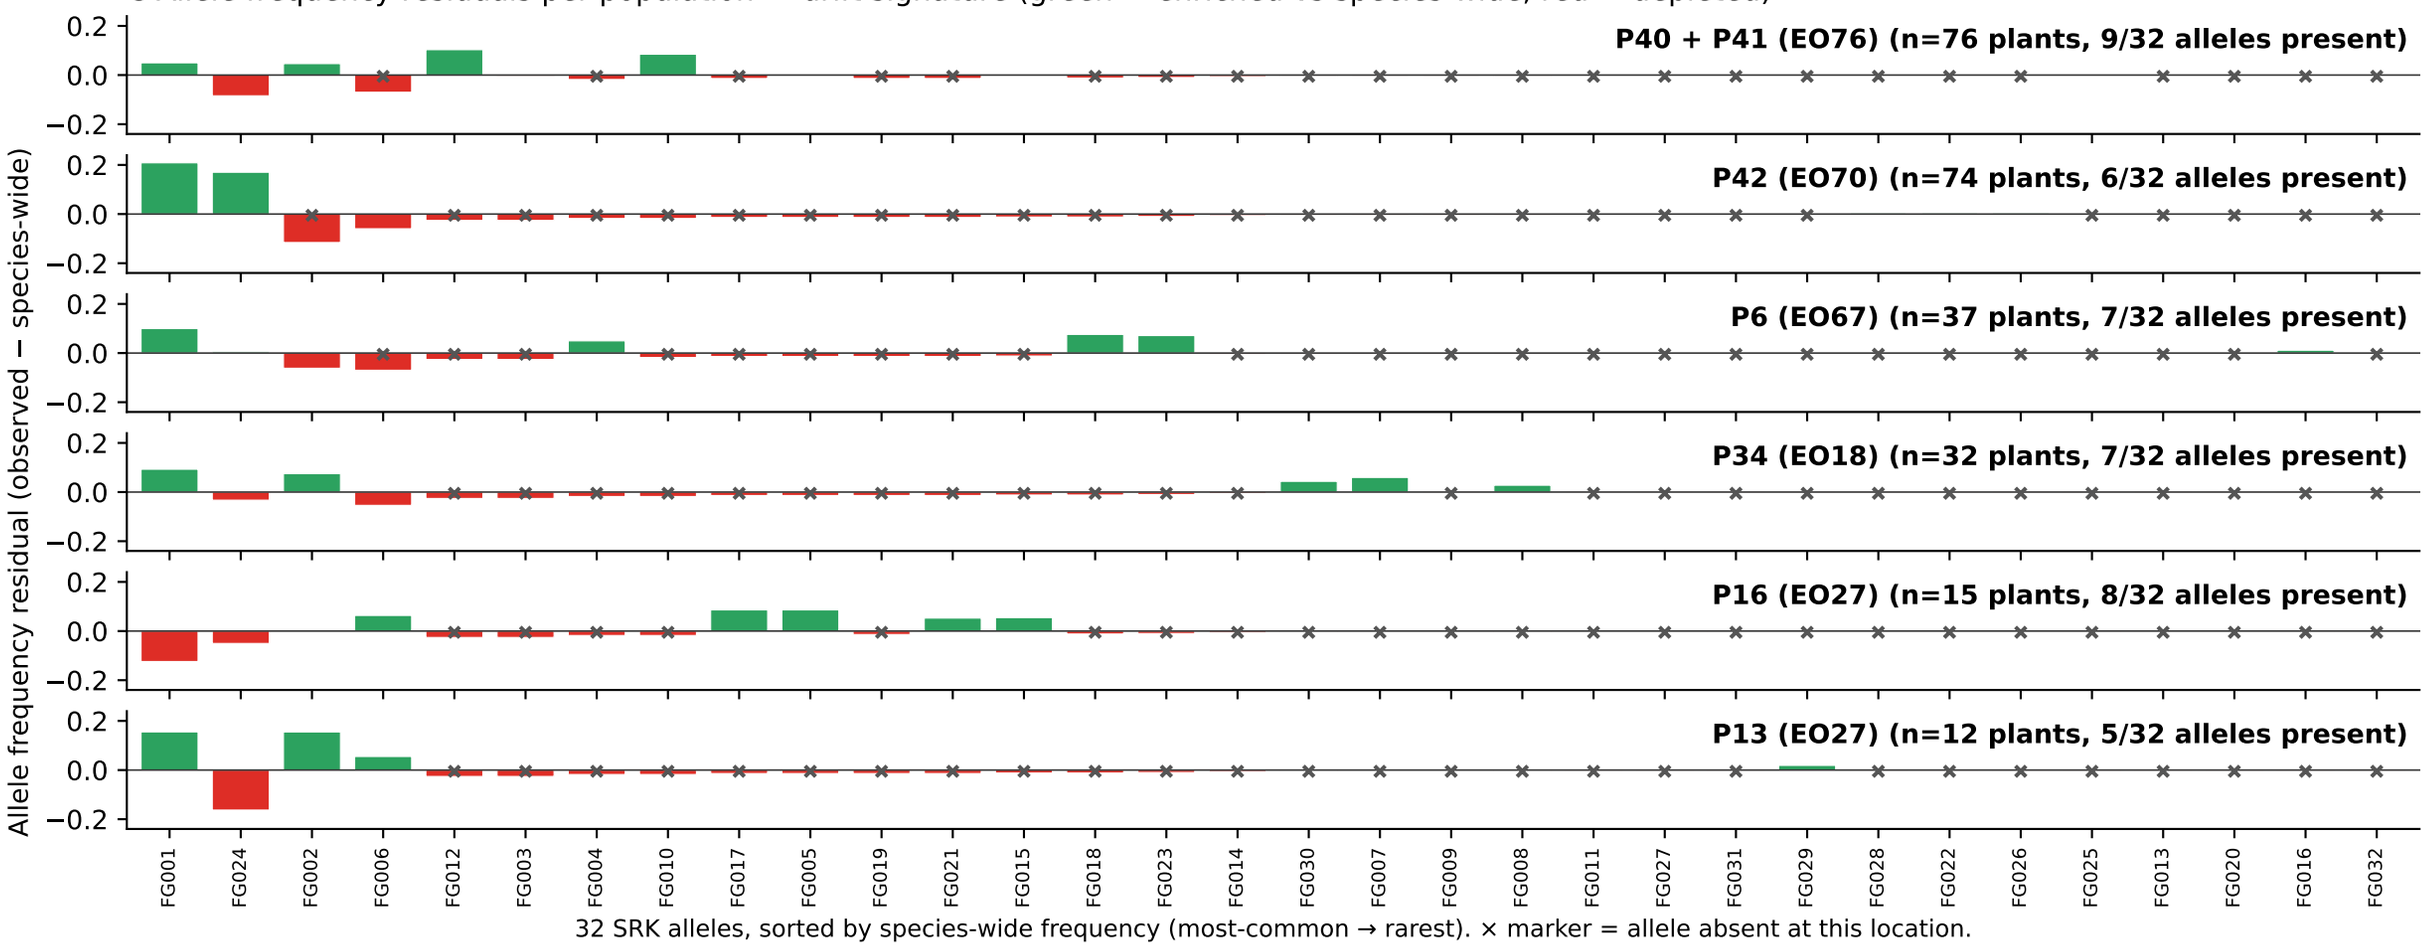
Part C — SRK-genotyped sites: P40 + P41 (EO76), P42 (EO70), P6 (EO67), P34 (EO18), P16 (EO27), P13 (EO27)
plants grown from wild seed or sampled in the wild | species-mean pollen compatibility = 0.779

A SRK allele diversity per population (ceiling = 32 alleles)



B Pollen compatibility under random mating





C Allele frequency residuals per population — drift signature (green = enriched vs species-wide, red = depleted)
