Part C — Clean-overlap populations (P3 = EO67, P41 = EO70, P39 = EO76) | adult SRK genotypes | species-mean pollen compatibility = 0.781
A SRK allele diversity per population (ceiling = 32 alleles)
Observed number of distinct SRK alleles
Predicted number of distinct SRK alleles
P39 (EO76)
P3 (EO67)
P41 (EO70)
B Pollen compatibility under random mating
Observed pollen compatibility
Predicted pollen compatibility under random mating
P39 (EO76)
P3 (EO67)
P41 (EO70)
C Allele frequency residuals per population — drift signature (green = enriched vs species-wide, red = depleted)
Allele frequency residual (observed − species-wide)
P39 (EO76) (n=76 adults, 9/32 alleles present)
P41 (EO70) (n=74 adults, 6/32 alleles present)
P3 (EO67) (n=37 adults, 7/32 alleles present)
FG001 FG024 FG002 FG006 FG012 FG003 FG004 FG010 FG017 FG005 FG019 FG021 FG015 FG018 FG023 FG014 FG030 FG007 FG009 FG008 FG011 FG027 FG031 FG029 FG028 FG022 FG026 FG025 FG013 FG020 FG016 FG032
32 SRK alleles, sorted by species-wide frequency (most-common → rarest). × marker = allele absent at this location.
