LEPA — per-population observed seed yield vs size expectation (all populations with ≥ 2 plants, n = 39 populations across 2 years)

2025 (open) · 2026 (filled) · ---- on species curve (fold = 1) · red halo = FDR < 0.05 BELOW (mate limitation) · green halo = FDR < 0.05 ABOVE (SI escape)

10^{-1} 10^{0} 10^{1}

Fold of expectation = observed ÷ expected seed yield from size (log scale)
< 1 = under-producing (mate limitation) · > 1 = over-producing (SI escape) · halos = FDR < 0.05 for that population × year
