## The challenge: very few seeds to start with

*wild populations: few fruits —*
*most likely reproductive failure*

**very few seeds**

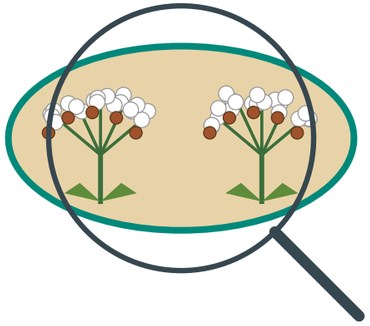

→ too few to restore populations directly

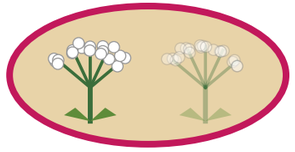

## 1. Prioritize populations for population restoration

**reproductively intact (source)**

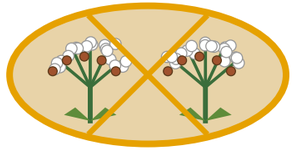

**top conservation priority: protect**

**mate-limited**

→ rescue (objective 3)

**inbreeding depression**

→ excluded as source

**technique: seed set for plant size (see Figure 3)**
