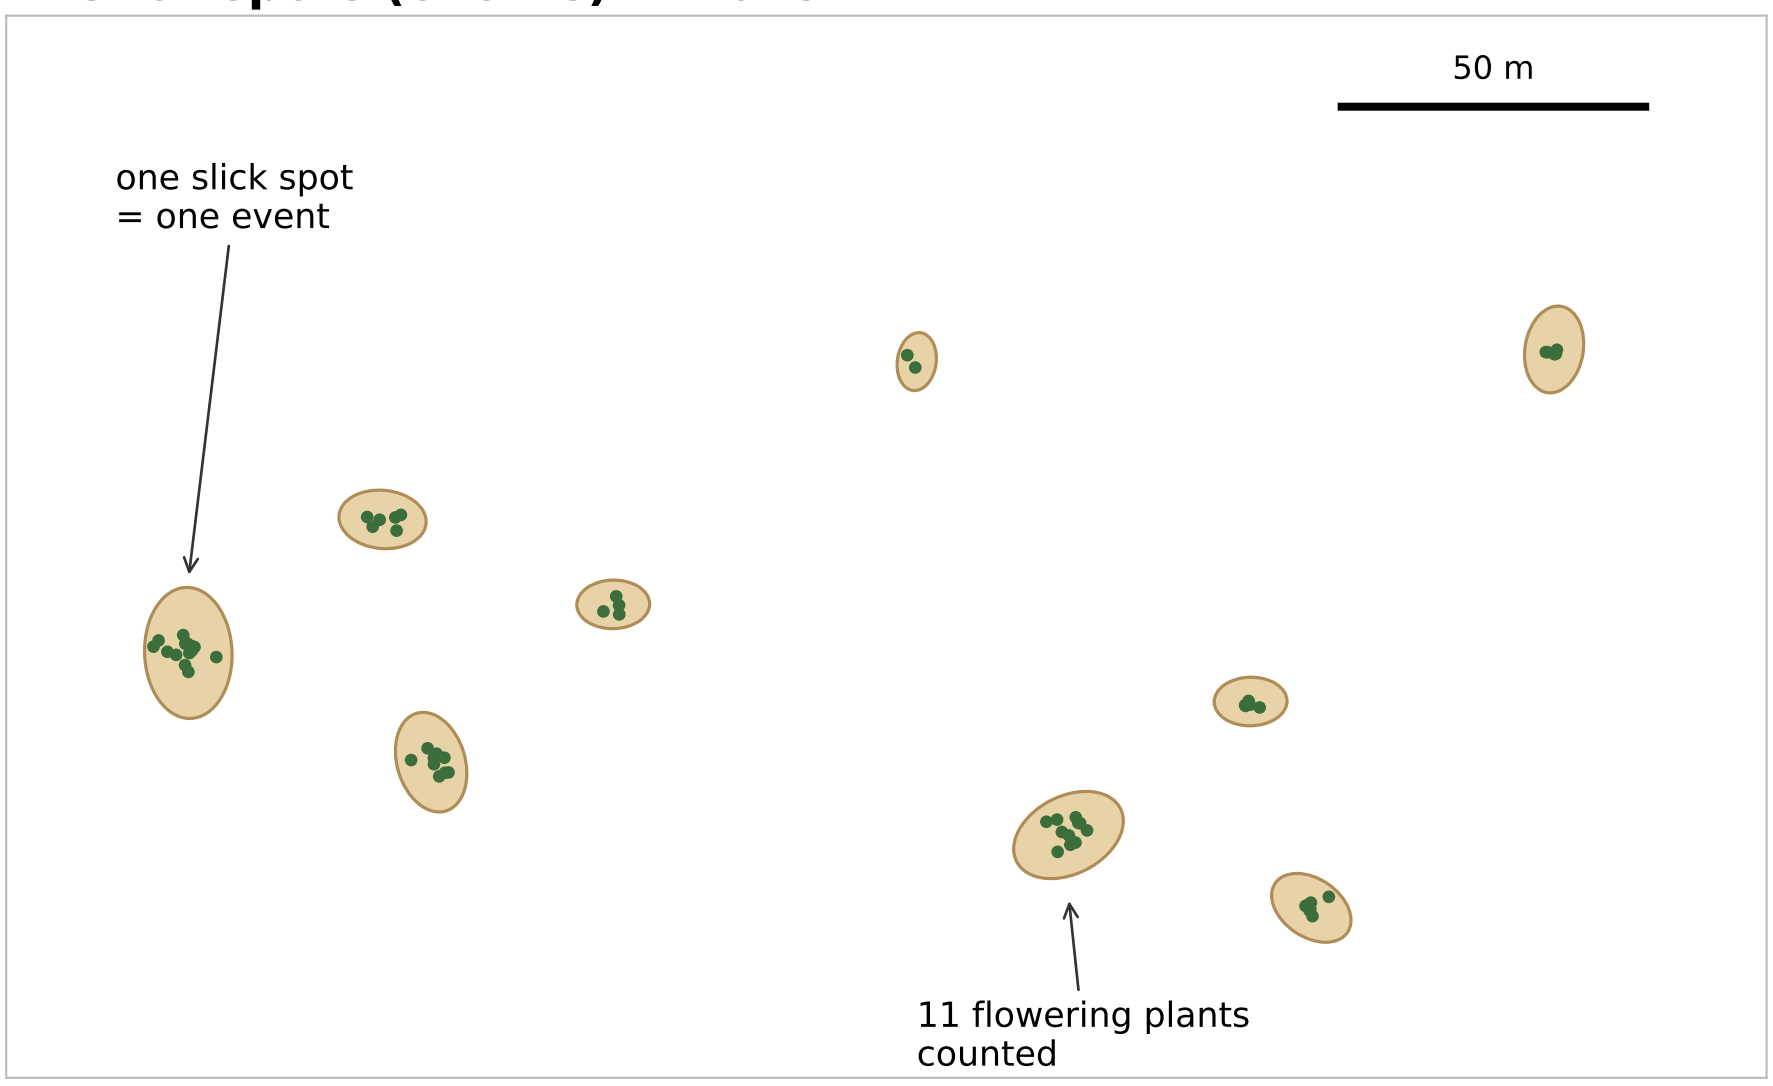
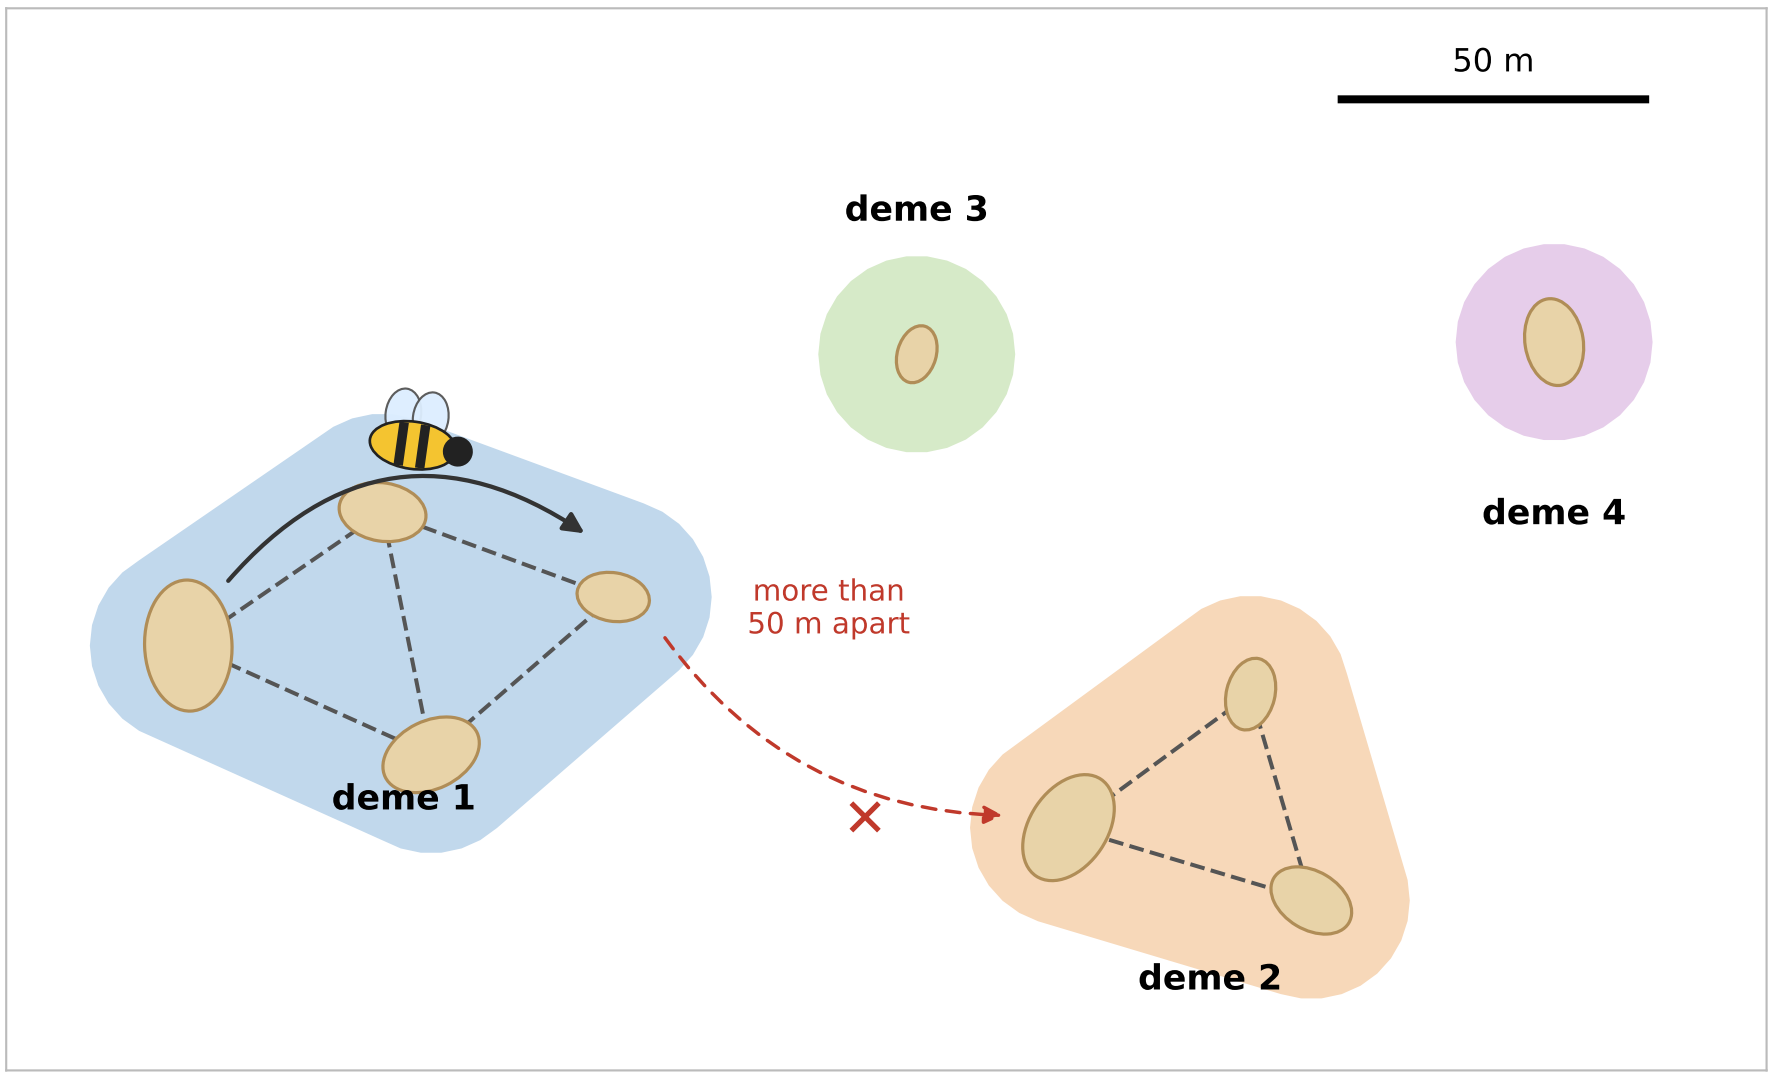
1. Slick spots (events) — 2025



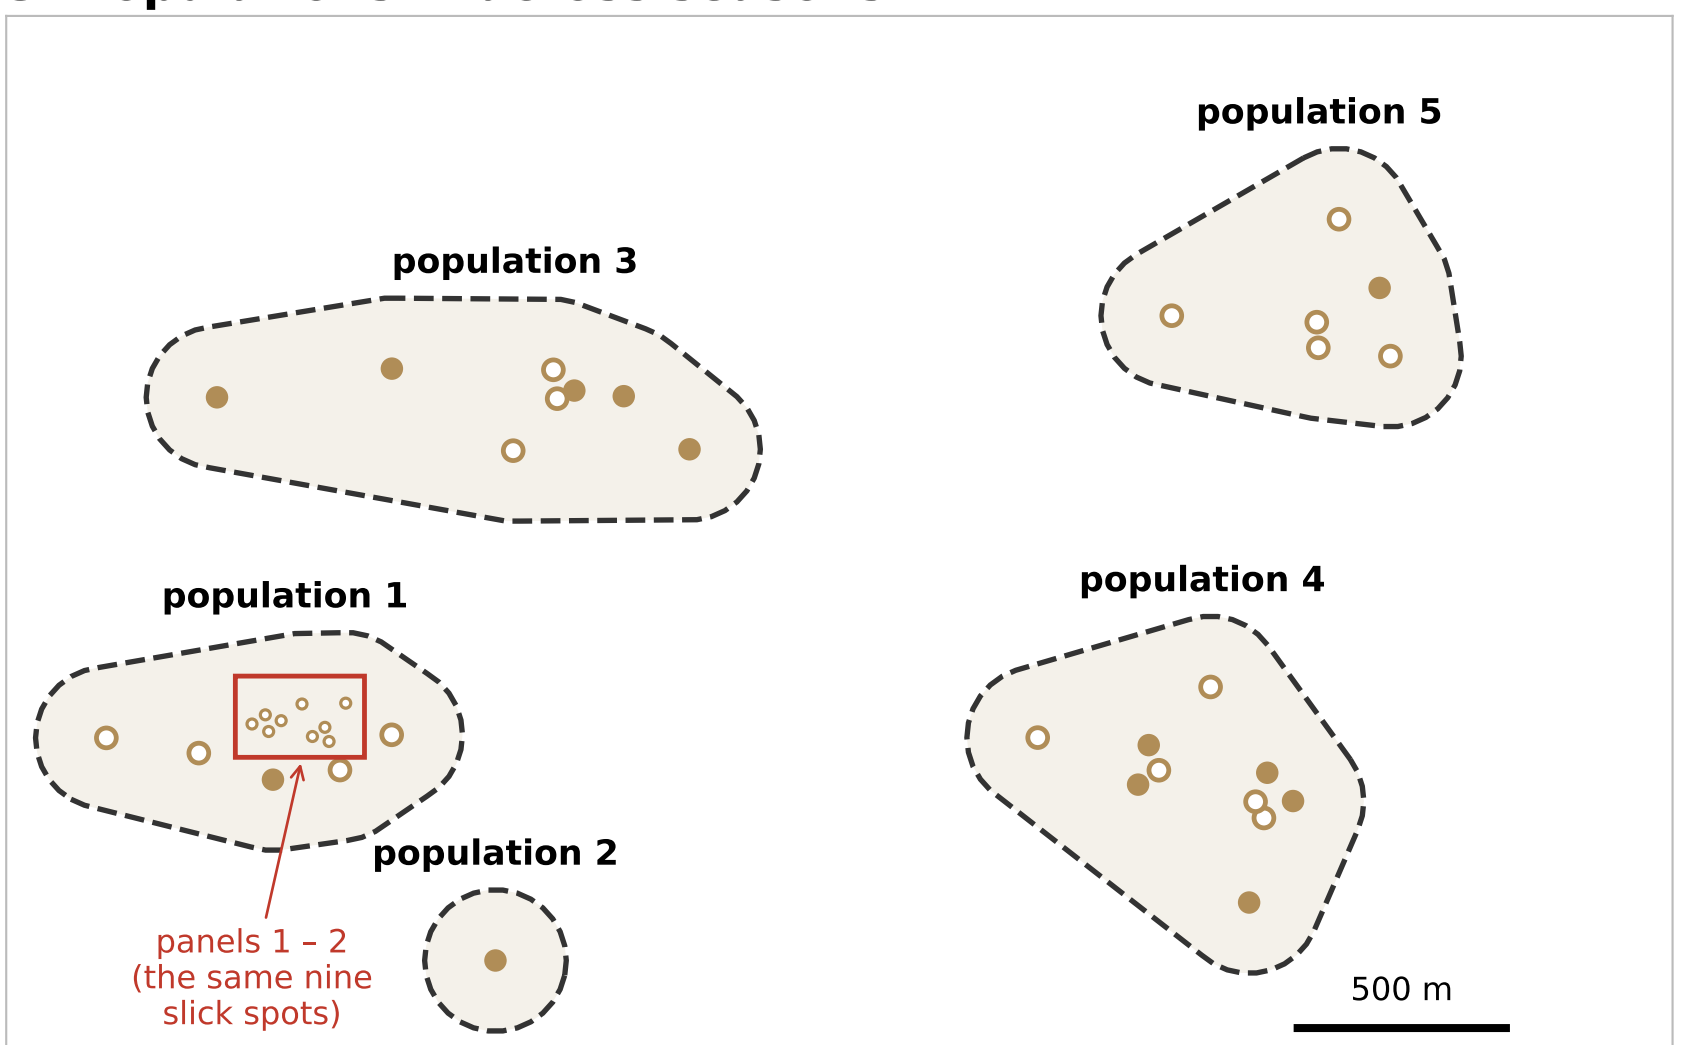
Each slick spot surveyed in a season is an event; its flowering plants are counted.

2. Demes — within a season (here 2025)



Pollinators move between slick spots less than 50 m apart, which then form one deme; a slick spot on its own is a deme by itself.

3. Populations — across seasons



Slick spots of all seasons (here 2025 and 2026) less than 500 m apart form one population; its demes are redrawn each season.

○ slick spot, 2025
● slick spot, 2026

Schematic — positions are invented, not a real site.
